

Estimate Your Home's Energy Efficiency

To estimate your home's energy efficiency, take your average electric bill and divide it by the square footage of your home. For example, a 1,800-square-foot home with a \$260 electric bill would cost \$0.14 per square foot.

$$\frac{\$260}{1,800 \text{ sq. ft.}} = \$0.14/\text{sq. ft.}$$

This home would benefit from energy efficiency improvements. Calculate your home's cost per square foot and see how it ranks on the scale to the right.

Please note: This calculation is based on an all-electric home without a pool or hot tub.
